Adding Fractions

an explain how to add fractions with like and unlike denominators.

* To add fractions, the denominators need to be the same number.

* The only numbers that get added are the numerators.

EX

$$\begin{array}{r} \frac{2}{3} \times \frac{4}{4} = \frac{8}{12} \\ + \frac{1}{4} \times \frac{3}{3} = \frac{3}{12} \\ \hline \end{array}$$

$$\frac{11}{12}$$

EX

$$\begin{array}{r} \frac{5}{7} \times \frac{2}{2} = \frac{10}{14} \\ + \frac{1}{2} \times \frac{7}{7} = \frac{7}{14} \\ \hline \end{array}$$

$$\frac{17}{14} = 1 \frac{3}{14}$$
