Subtracting Fractions

can explain how to subtract fractions with like and unlike denominators.

Subtracting fractions

* We have to have common denominators and we only subtract the numerator, the denominator stays the same.

$$\boxed{\text{EX}} \quad \frac{3}{5} \times \frac{2}{2} = \frac{\textcircled{6}}{10}$$

$$\boxed{\text{EX}} \quad \frac{7}{8} \times \frac{3}{3} = \frac{\textcircled{21}}{24}$$

$$- \frac{2}{10} \times \frac{1}{1} = \frac{\textcircled{2}}{10}$$

$$- \frac{2}{3} \times \frac{8}{8} = \frac{\textcircled{16}}{24}$$

$$\frac{4}{10}$$

$$\frac{5}{24}$$
